

```
#include<iostream>
#include<string>
Using namespace std;
class student {
public:
    int rollno;
    string name;
    student (int rollno, string name): rollno(rollno), name(name) {}
    getter(){
        cout<<name<<endl<<rollno;

    }

};
int main (){
    student s1("kamal",12345);
    s1.getter();
    return 0;
}
```
