```cpp
#include<iostream>
#include<string>
Using namespace std;
class student {
public:
    int rollno;
    string name;
    student (int rollno, string name): rollno(rollno), name(name) {}
 getter(){
    cout<<name<<endl<<rollno;

 }

};
int main (){
    student s1("kamal",12345);
    student s2(s1);
    s1.getter();
    s2.getter();

return 0;
}
```
